

BookSystems®

Library and Textbook Automation

20 Years. 10,000 Customers.
50 States. 37 Countries.

Textbook inventory is one of the largest investments a school makes. A school with 2,500 students can have as much as \$1 million in textbook inventory. The traditional manual method of tracking textbook inventory is labor-intensive and time-consuming, leaving your school vulnerable to loss, damage, and uncollected dues.

Book Systems offers Booktracks, a total solution for managing and tracking textbooks and other instructional materials through out the entire district. More than just a simple database, Booktracks is a powerful, yet easy-to-use tool to classify, simplify, and manage textbook distribution.

Booktracks provides a complete at-a-glance reporting of your entire textbook inventory, showing titles, copies, conditions, locations, and item status details. Cataloging, processing, and distribution of textbooks to students becomes quick, efficient, and painless using simple barcode technology.

Booktracks keeps students responsible for their textbooks by maintaining detailed and accurate information. You are able to see precisely which textbooks are issued to a student and in what condition they should be in when returned. A distribution receipt can also be printed for the student with item details.

Reconciling at the end-of-year becomes a breeze, as Booktracks can automatically assess lost and damaged items, send fine/fee notices by mail or email, generate standard and custom reports, and provide accurate details of your actual inventory.

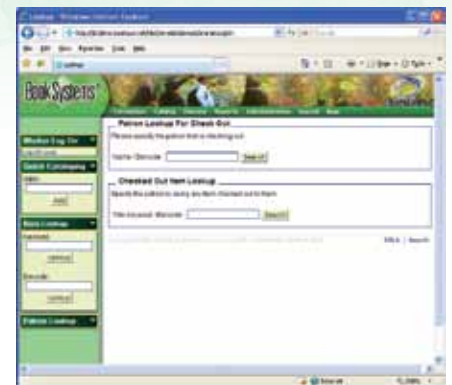

- ◆ Real-time district wide reporting
- ◆ Web-based application for **Windows** or **Linux**
- ◆ Centralized database
- ◆ Browser-based interface
- ◆ Fast and easy access from anywhere
- ◆ Single software installation

"I LOVE the software. I've been using both Booktracks and Atrium and find them easy to use..."

Michele Bowman
Librarian
Northview Elementary School
Kodak, TN

Tennessee

Powerful, user-friendly interface allows issuance and reporting with minimal effort!

Client Workstation:

- Any workstation can access Atrium with a browser.

Supported Browsers are:

- Microsoft Internet Explorer® v8.0
- Mozilla Firefox® v3.5
- Apple® Safari® v4.0

Supported Platforms are:

- Linux
- Windows®
- Mac®

- Adobe® Acrobat Reader is required to view PDF formatted system reports.
- Optional hardware devices installed may require a local device driver.

* Please contact Book Systems for more details.

Graphics Resolution:

1024 x 768 or higher.

Server Hardware:

Dedicated server required.

Custom Specifications:

For a free consultation, please contact us at (800) 219-6571.

Because technical needs vary, Book Systems will work with you to identify the specific needs of your district/Textbook system. A Project Manager will be assigned to assist in defining the ideal system requirements for optimal performance. Our recommendations will be based on the bandwidth and transaction volume for your situation.

Booktracks was developed specifically with a school system's special needs in mind. Export your student data from many popular administrative packages to get your textbook management system in operation quickly. Booktracks is a centralized Web-based application that is simple enough for a novice user with minimal training, while the robust functionality will please even the most advanced users. The high-level password security system allows only the right people to perform important administrative functions.

Booktracks provides a significant return on your school's investment. It keeps a tight reign on one of the most costly resources within a school...the textbooks.
